

GitHub Copilot Governance Best Practices

Budget Hierarchy

Enterprise Budget ↓ Cost Center Budget ↓ User Budget

Implement governance at all three levels.

Start Simple

- ✓ Enterprise budget first
- ✓ Universal user budget
- ✓ Monitor usage for 30 days
- ✓ Refine based on real consumption patterns

Establish Guardrails

- ✓ Configure spending thresholds
- ✓ Enable alerts at 75%, 90%, and 100%
- ✓ Review budgets monthly
- ✓ Document exception processes

Create Role-Based Policies

Different users require different limits.

Examples:

- Architects → Higher limits
- Platform Engineers → Higher limits
- Occasional Users → Standard limits

Build an AI Governance Culture

- ✓ Encourage responsible AI usage
- ✓ Educate teams on token consumption
- ✓ Share optimization techniques

- ✓ Review usage trends regularly

Success Metric

The goal is not to reduce AI usage.

The goal is to maximize developer productivity while maintaining visibility, predictability, and cost control.
